11 July 2026

Confidentiality Statement

This document defines the analytical architecture, measurement philosophy, Key Performance Indicator (KPI) framework, business measurement strategy, and decision-support model for the Project Velox Decision Intelligence Platform. It serves as the primary reference for designing stakeholder-specific KPIs, analytical calculations, business health measurement, and dashboard intelligence. The analytical concepts, KPI definitions, and measurement methodologies described in this document are intended solely for educational, portfolio, and project implementation purposes.

CHAPTER 1 – Analytics Foundation

1. Analytics Measurement Philosophy

1.1 Purpose

The Analytics & KPI Specification establishes the analytical foundation of Project Velox by defining how organizational performance will be measured, interpreted, and monitored. Rather than evaluating the business using isolated metrics, the platform adopts a structured performance measurement framework that connects strategic objectives with operational activities.

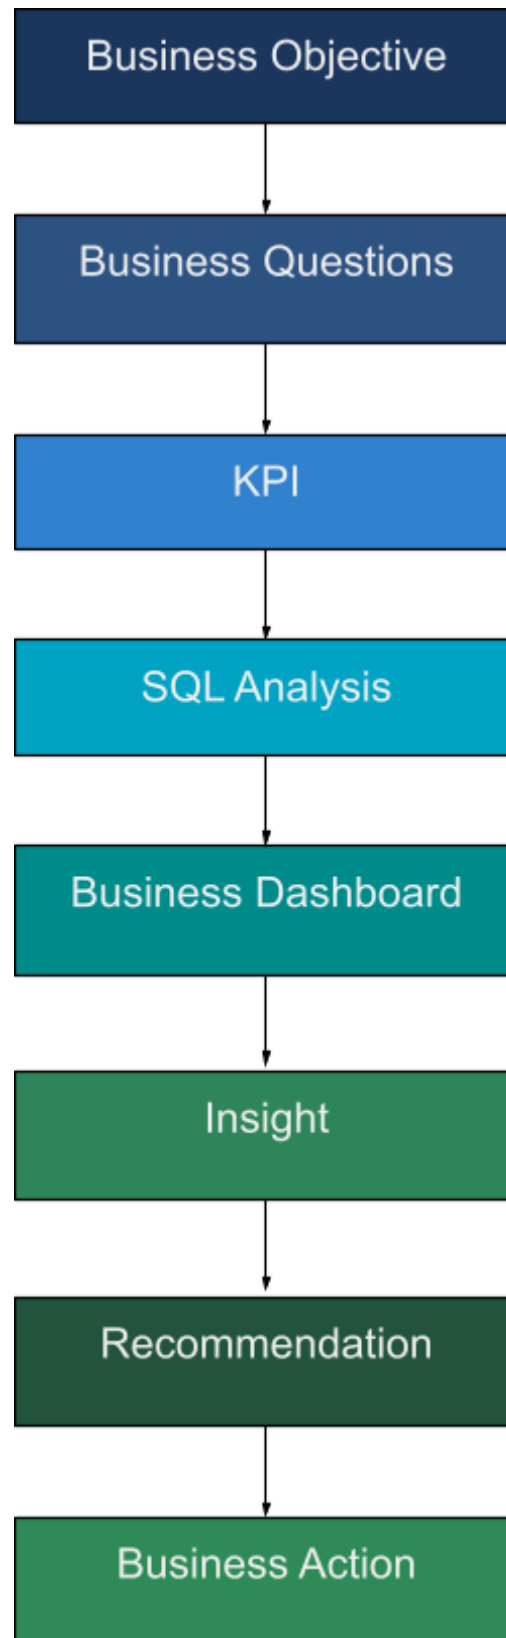

Each KPI documented within this specification is designed to answer a business question, support stakeholder decision-making, and enable continuous improvement through measurable outcomes.

1.2 Analytics Philosophy

The platform follows five fundamental analytical principles that govern every KPI, dashboard, and business recommendation.

Principle	Description
Business First	Every KPI must solve a business problem rather than demonstrate technical complexity.
Stakeholder Driven	Each metric exists because a stakeholder requires it for decision-making.
Context Aware	Metrics are interpreted alongside business context such as weather, traffic, festivals, preparation time, and customer behaviour.
Actionable	Every KPI should naturally lead to one or more business actions.
Continuous Improvement	Weekly reviews encourage iterative operational improvements instead of reactive firefighting.

1.3 Measurement Lifecycle

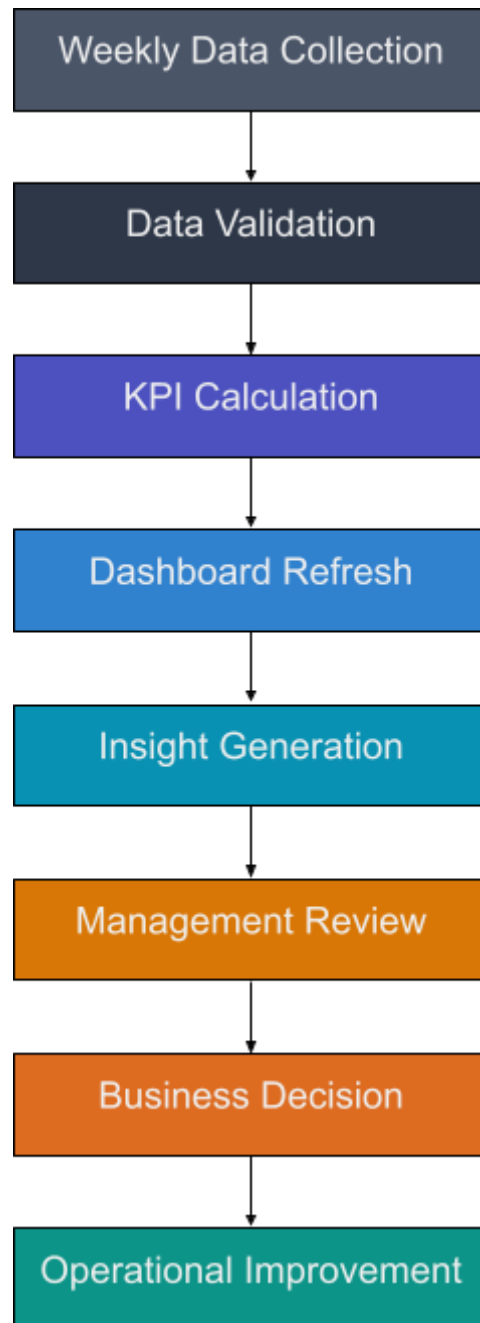

1.4 KPI Classification

Level	Purpose	Primary Users	Examples
Level 1 – Strategic KPIs	Measure overall organizational performance	CEO & Leadership	Executive Health Index, Revenue Quality Score, Growth Momentum Index
Level 2 – Tactical KPIs	Monitor departmental performance	Operations, Marketing, Finance	Operational Health Score, Customer Loyalty Score, Restaurant Performance Score
Level 3 – Operational KPIs	Monitor day-to-day activities	Operations Teams	Rider Efficiency Score, Rider Fatigue Index, Zone Stability Index, Customer Recovery Rate

1.5 KPI Design Principles

Design Principle	Explanation
Relevant	Directly supports a business objective.
Measurable	Can be calculated consistently from available data.
Actionable	Leads to operational or strategic decisions.
Comparable	Supports trend and cross-city comparisons.
Consistent	Uses standardized business rules across reports.
Explainable	Can be understood by both technical and business stakeholders.

1.6 Weekly Decision Intelligence Cycle

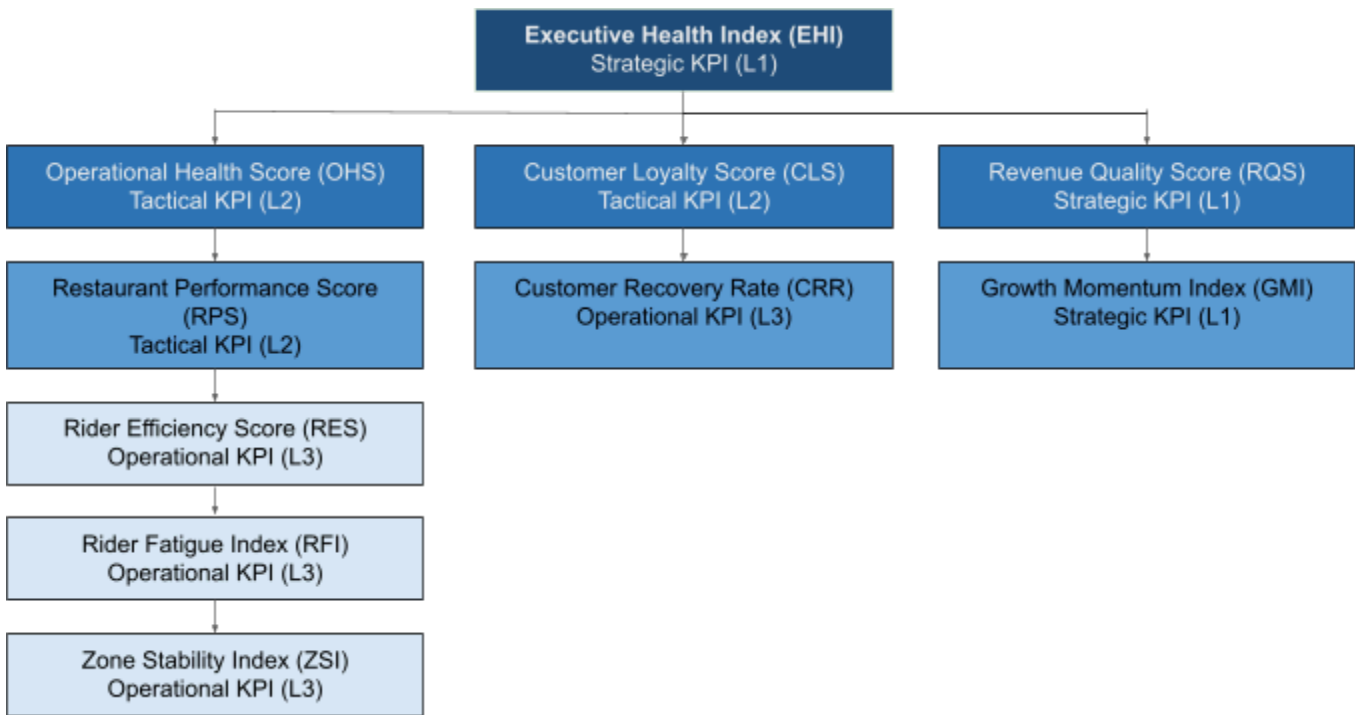

1.7 Chapter Summary

The Analytics Framework establishes a standardized approach for measuring business performance across Project Velox. By defining common analytical principles, KPI classifications, and decision-making workflows, the platform ensures that every metric contributes to meaningful business insights and supports consistent, stakeholder-focused decision-making.

CHAPTER 2 – Enterprise KPI Framework

2.1 Enterprise KPI Hierarchy

Figure 2.1 — Enterprise KPI Hierarchy of Project Velox

2.1.1 Hierarchy Interpretation

The Enterprise KPI Hierarchy illustrates the multi-level performance measurement framework adopted by Project Velox. At the highest level, the Executive Health Index (EHI) provides a consolidated view of organizational performance by integrating three strategic dimensions: Operational Excellence, Customer Excellence, and Financial Excellence. Strategic KPIs are supported by tactical KPIs, operational KPIs, and underlying business metrics according to their analytical dependencies. This allows stakeholders to drill down from high-level business performance to the underlying operational drivers. This hierarchical structure ensures that executive decisions are supported by measurable, traceable, and actionable business metrics across every level of the organization.

Table 2.1 – KPI Dependency Matrix

KPI	KPI Level	Primary Stakeholder	Direct Dependencies
Executive Health Index (EHI)	Strategic	CEO	OHS, CLS, RQS
Operational Health Score (OHS)	Tactical	Operations	RPS, RES, ZSI
Customer Loyalty Score (CLS)	Tactical	Marketing	CRR, Repeat Order Rate, Customer Ratings
Revenue Quality Score (RQS)	Strategic	Finance	Revenue, Refunds, Cancellations
Restaurant Performance Score (RPS)	Tactical	Restaurant Team	Preparation Time, Order Accuracy, Customer Ratings
Rider Efficiency Score (RES)	Operational	Operations	Delivery Time, Distance
Rider Fatigue Index (RFI)	Operational	Operations	Rider Workload
Zone Stability Index (ZSI)	Operational	Operations	Delay Rate, Demand, Weather
Customer Recovery Rate (CRR)	Operational	Customer Experience	Complaint Resolution
Growth Momentum Index (GMI)	Strategic	CEO	Revenue Trend, Customer Growth

PART I – Strategic KPIs

Purpose

Strategic KPIs provide executive leadership with a consolidated view of organizational performance by measuring the overall health, financial sustainability, and long-term growth of the business. These KPIs support high-level decision-making and serve as the primary indicators reviewed during weekly executive performance meetings.

The Strategic KPI layer consists of the following indicators:

- Executive Health Index (EHI)
- Revenue Quality Score (RQS)
- Growth Momentum Index (GMI)

2.2 Executive Health Index (EHI)

Figure 2.2 – Executive Health Index Architecture

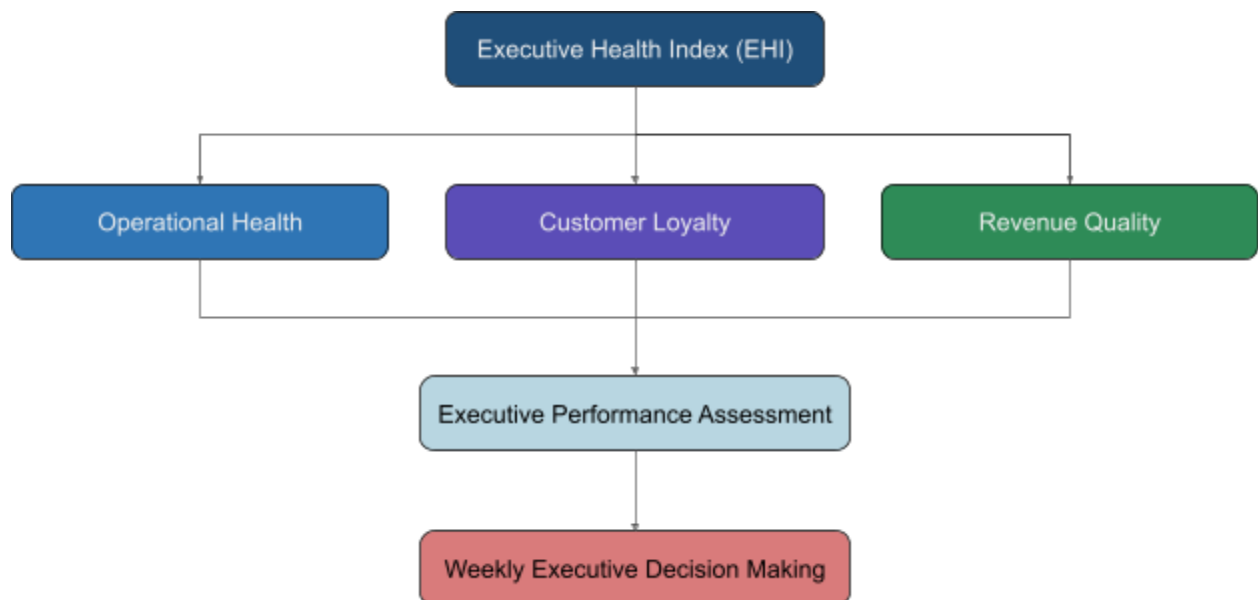

Table 2.2 – Executive Health Index Profile

Attribute	Description
KPI Name	Executive Health Index (EHI)
KPI Category	Strategic KPI
Primary Stakeholder	Chief Executive Officer (CEO)
Business Objective	Measure the overall health of the organization through a unified executive performance indicator.
Review Frequency	Weekly
Dashboard	Executive Dashboard
Reporting Level	Organization-wide

2.2.1 Business Purpose

The Executive Health Index (EHI) serves as the highest-level performance indicator within Project Velox, providing executive leadership with a unified assessment of organizational health. Rather than monitoring isolated business metrics independently, the EHI consolidates operational performance, customer experience, and financial sustainability into a single strategic indicator that reflects the overall condition of the organization.

Its primary purpose is to enable senior management to quickly identify whether the business is operating within expected performance levels and determine when deeper operational analysis is required.

2.2.2 Business Importance

The Executive Health Index acts as the primary decision-support KPI for executive leadership. It simplifies complex business information into a single, interpretable metric that facilitates weekly business reviews, strategic planning, and performance monitoring.

By continuously tracking overall organizational health, the EHI enables executives to identify emerging risks, evaluate the impact of operational improvements, prioritize strategic initiatives, and ensure that all departments contribute collectively toward long-term business success.

2.2.3 Supporting Metrics

Table 2.3 – Supporting Metrics of Executive Health Index

Supporting KPI	Business Contribution
Operational Health Score (OHS)	Measures delivery operations and service efficiency.
Customer Loyalty Score (CLS)	Represents customer retention and satisfaction.
Revenue Quality Score (RQS)	Reflects financial sustainability and revenue health.

2.2.4 Business Logic

The Executive Health Index is calculated by integrating three strategic dimensions of business performance: operational excellence, customer excellence, and financial excellence. Rather than assigning equal importance to all operational metrics, the platform evaluates organizational health by combining the outcomes of Operational Health Score, Customer Loyalty Score, and Revenue Quality Score into a single executive measurement.

This approach enables leadership to evaluate overall business performance while preserving the ability to investigate individual performance dimensions through drill-down analysis.

2.2.5 Threshold Levels

Table 2.4 – Executive Health Index Threshold Matrix

EHI Score	Business Status	Executive Interpretation
85–100	Excellent	Organization is performing exceptionally well.
70–84	Stable	Business performance is healthy with minor optimization opportunities.
50–69	Attention Required	Operational review is recommended to prevent performance decline.
Below 50	Critical	Immediate executive intervention is required.

2.2.6 Business Interpretation

A high Executive Health Index indicates that operational efficiency, customer satisfaction, and financial performance are collectively aligned with organizational objectives. Conversely, a declining EHI signals that one or more strategic business dimensions require further investigation. Rather than acting as a standalone metric, the EHI serves as the starting point for executive analysis, prompting stakeholders to examine supporting KPIs to identify the underlying causes of performance variation.

2.2.7 Recommended Business Actions

Business Condition	Recommended Executive Action
Excellent	Continue monitoring and identify best practices for replication.
Stable	Review tactical KPIs for optimization opportunities.
Attention Required	Investigate declining strategic dimensions and assign corrective actions.
Critical	Initiate executive review, prioritize operational recovery, and monitor progress weekly.

2.2.8 Dashboard Representation

The Executive Health Index will be displayed prominently within the Executive Dashboard as the primary organizational performance indicator. Supporting visualizations will include a KPI card for the current score, a gauge chart illustrating performance thresholds, a weekly trend line showing historical movement, and a drill-down navigation pathway to Operational Health Score, Customer Loyalty Score, and Revenue Quality Score for detailed analysis.

2.2.9 Related KPIs

Related KPI	Relationship
Operational Health Score	Primary operational contributor to EHI.
Customer Loyalty Score	Measures customer experience impact on overall health.
Revenue Quality Score	Represents financial contribution to executive performance.
Growth Momentum Index	Complements EHI by measuring long-term organizational growth.

2.3 Revenue Quality Score (RQS)

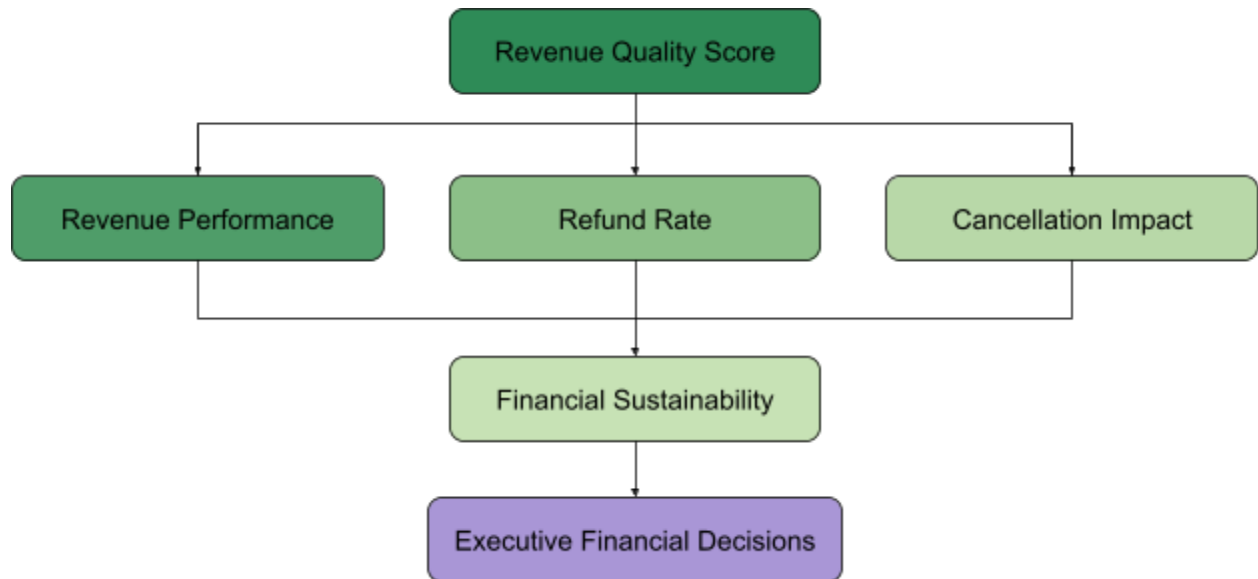

Table 2.5 – Revenue Quality Score Profile

Attribute	Description
KPI Name	Revenue Quality Score (RQS)
KPI Category	Strategic KPI
Primary Stakeholder	Finance Team & CEO
Business Objective	Evaluate the sustainability and quality of organizational revenue by considering revenue generation alongside refunds and cancellations.
Review Frequency	Weekly
Dashboard	Executive Dashboard & Finance Dashboard
Reporting Level	Organization-wide

2.3.1 Business Purpose

The Revenue Quality Score measures the financial health of the organization by evaluating not only the volume of revenue generated but also its sustainability and overall quality. Rather than relying solely on gross revenue, the KPI incorporates the impact of refunds, cancellations, and operational losses to provide a more realistic assessment of financial performance.

2.3.2 Business Importance

Revenue growth alone does not guarantee business success. The Revenue Quality Score helps management distinguish between healthy, sustainable growth and revenue generated at the expense of excessive refunds, promotional dependency, or operational inefficiencies. This enables better financial planning and supports long-term profitability.

2.3.3 Supporting Metrics

Table 2.6 – Supporting Metrics of Revenue Quality Score

Supporting Metric	Business Contribution
Weekly Revenue	Measures total business revenue.
Refund Rate	Indicates financial loss due to refunds.
Cancellation Rate	Reflects revenue leakage from cancelled orders.
Average Order Value	Represents customer spending behaviour.
Platform Fee Revenue	Measures earnings generated by the platform.

2.3.4 Business Logic

The Revenue Quality Score integrates multiple financial indicators to evaluate the effectiveness and sustainability of revenue generation. Positive financial performance increases the score, while higher refund rates, cancellation losses, and excessive dependence on discounts reduce it. The resulting KPI provides management with a balanced view of financial health beyond simple revenue totals.

2.3.5 Threshold Levels

Table 2.7 – Revenue Quality Score Threshold Matrix

RQS Score	Business Status	Executive Interpretation
85–100	Excellent	Revenue growth is sustainable and financially healthy.
70–84	Stable	Financial performance is satisfactory with minor optimization opportunities.
50–69	Attention Required	Financial risks require investigation.
Below 50	Critical	Immediate financial review and corrective action are required.

2.3.6 Business Interpretation

A high Revenue Quality Score indicates that the organization is generating healthy revenue while effectively controlling refunds, cancellations, and operational losses. A declining score suggests increasing financial risk and prompts further investigation into revenue quality rather than revenue quantity.

2.3.7 Recommended Business Actions

Business Condition	Recommended Action
Excellent	Continue current financial strategy and monitor trends.
Stable	Optimize promotional campaigns and reduce operational costs.
Attention Required	Analyze refund and cancellation drivers.
Critical	Initiate financial review and implement immediate recovery measures.

2.3.8 Dashboard Representation

The Revenue Quality Score will be presented through a KPI card, gauge visualization, weekly trend chart, refund analysis panel, cancellation trend, and revenue breakdown to support executive and finance teams during weekly performance reviews.

2.3.9 Related KPIs

Related KPI	Relationship
Executive Health Index	Revenue Quality contributes directly to overall organizational health.
Growth Momentum Index	Sustainable revenue supports long-term growth.
Customer Loyalty Score	Loyal customers improve revenue stability through repeat purchases.

2.3.10 Business Risks

Risk	Potential Business Impact
High refund rate	Reduced profitability
Rising cancellations	Revenue leakage
Excessive discount dependency	Unsustainable growth
Declining average order value	Reduced customer lifetime value

2.4 Growth Momentum Index (GMI)

Figure 2.4 – Growth Momentum Index Framework

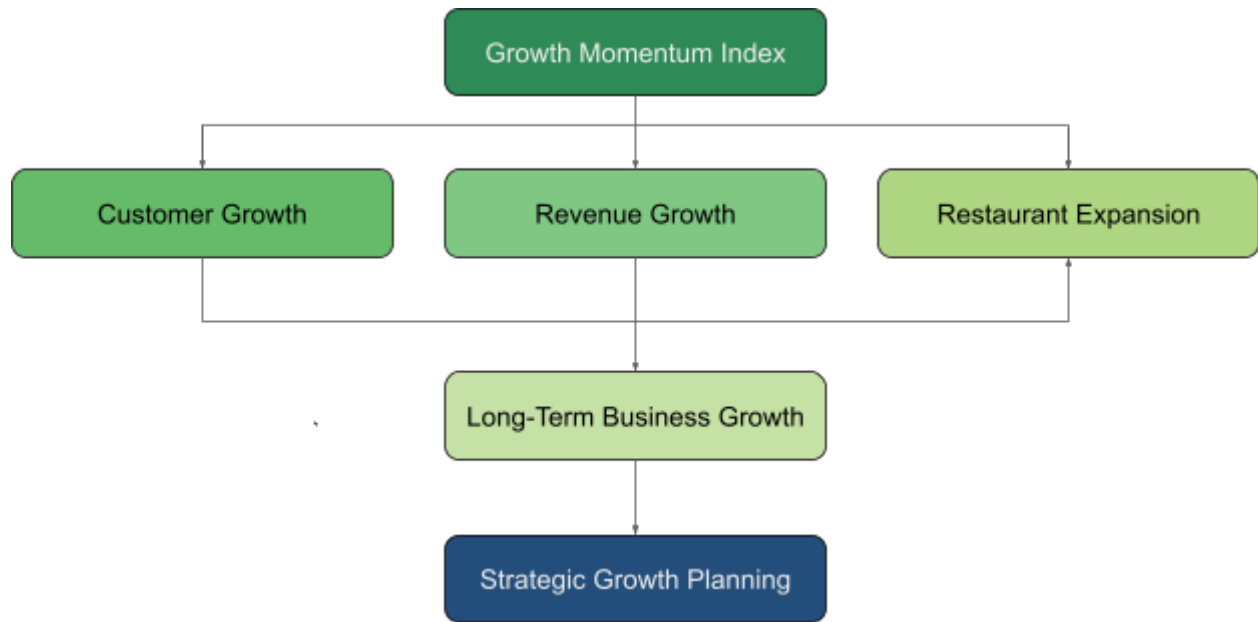

Table 2.8 – Growth Momentum Index Profile

Attribute	Description
KPI Name	Growth Momentum Index (GMI)
KPI Category	Strategic KPI
Primary Stakeholder	CEO & Strategy Team
Business Objective	Measure the long-term growth trajectory of the organization by combining customer expansion, revenue growth, and business scalability.
Review Frequency	Weekly
Dashboard	Executive Dashboard
Reporting Level	Organization-wide

2.4.1 Business Purpose

The Growth Momentum Index evaluates whether Project Velox is achieving sustainable long-term growth rather than experiencing temporary increases in business activity. By integrating customer acquisition, revenue growth, and platform expansion into a unified indicator, the KPI enables leadership to monitor whether current business strategies are generating consistent and scalable organizational growth.

2.4.2 Business Importance

While operational efficiency ensures stable day-to-day performance, sustainable business success depends on continuous growth. The Growth Momentum Index provides executive leadership with a forward-looking perspective by measuring the organization's ability to expand its customer base, increase revenue, and strengthen its market presence over time. This KPI supports strategic planning, investment decisions, and long-term business development initiatives.

Table 2.9 – Supporting Metrics of Growth Momentum Index

Supporting Metric	Business Contribution
Weekly Revenue Growth	Indicates financial expansion over time.
New Customer Acquisition	Measures market penetration.
Repeat Customer Growth	Represents customer retention and loyalty.
Restaurant Onboarding Rate	Reflects platform scalability.
Order Volume Growth	Measures increasing customer demand.

2.4.4 Business Logic

The Growth Momentum Index combines multiple long-term growth indicators to evaluate whether Project Velox is expanding in a sustainable manner. Rather than relying on a single growth metric, the KPI considers revenue trends, customer acquisition, repeat purchasing behaviour, restaurant onboarding, and order volume to provide a comprehensive assessment of organizational momentum.

2.4.5 Threshold Levels

Table 2.10 – Growth Momentum Index Threshold Matrix

GMI Score	Business Status	Executive Interpretation
85–100	Excellent	Strong and sustainable business growth.
70–84	Stable	Healthy growth with opportunities for acceleration.
50–69	Attention Required	Growth is slowing and requires strategic evaluation.
Below 50	Critical	Growth has stagnated and immediate intervention is recommended.

2.4.6 Business Interpretation

A high Growth Momentum Index indicates that the organization is expanding steadily through increased customer acquisition, stronger revenue performance, and continuous platform development. A declining score suggests that growth initiatives are losing effectiveness, requiring management to investigate underlying market, operational, or competitive factors before long-term performance is affected.

2.4.7 Recommended Business Actions

Table 2.11 – Recommended Business Actions

Business Condition	Recommended Action
Excellent	Continue current growth strategy and explore expansion opportunities.
Stable	Strengthen customer acquisition campaigns and optimize growth initiatives.
Attention Required	Investigate declining acquisition trends and review expansion plans.
Critical	Reassess strategic direction and implement growth recovery initiatives.

2.4.8 Dashboard Representation

The Growth Momentum Index will be presented through a KPI scorecard, weekly trend analysis, customer acquisition dashboard, revenue growth visualization, restaurant onboarding tracker, and long-term growth indicators. Interactive drill-down capabilities will enable stakeholders to identify the primary drivers contributing to changes in organizational growth momentum.

2.4.9 Related KPIs

Table 2.12 – Related KPIs

Related KPI	Relationship
Executive Health Index	Growth Momentum contributes to long-term executive performance assessment.
Revenue Quality Score	Sustainable financial performance strengthens growth potential.
Customer Loyalty Score	Loyal customers increase repeat purchases and long-term growth.
Restaurant Performance Score	High-performing restaurants support platform expansion.

2.4.10 Business Risks

Table 2.13 – Business Risks

Risk	Potential Business Impact
Declining Customer Acquisition	Reduced market expansion and slower business growth.
Revenue Stagnation	Limits investment capacity and future scalability.
Poor Restaurant Onboarding	Restricts geographical expansion and service availability.
Reduced Repeat Purchases	Weakens customer lifetime value and growth sustainability.

Strategic KPI Summary

KPI	Primary Stakeholder	Business Focus	Review Frequency	Dashboard
Executive Health Index	CEO	Overall Organizational Health	Weekly	Executive
Revenue Quality Score	CEO & Finance	Financial Sustainability	Weekly	Executive & Finance
Growth Momentum Index	CEO & Strategy	Long-Term Growth	Weekly	Executive

PART II – Tactical KPIs

Purpose

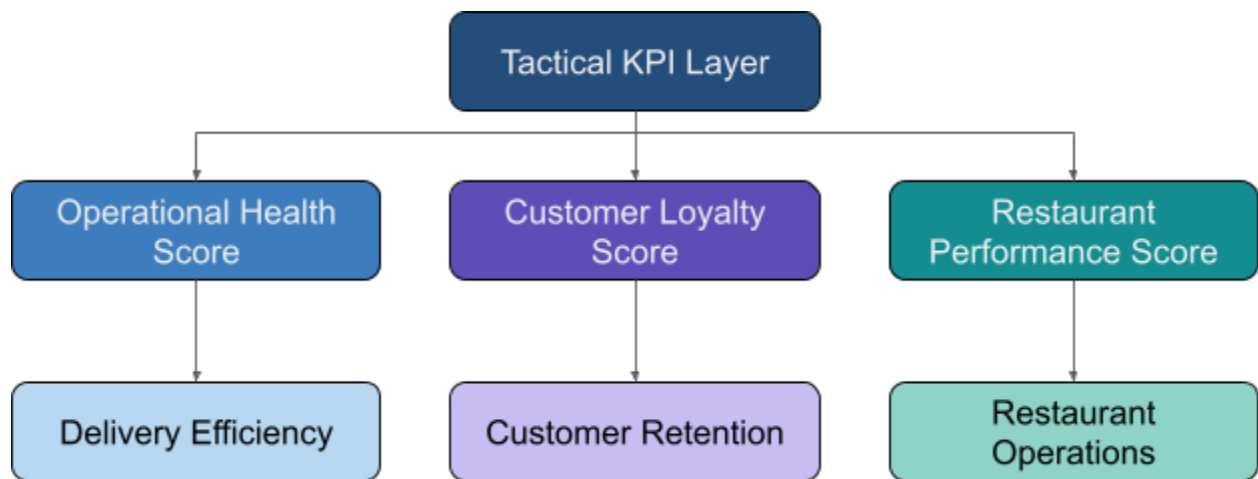

Tactical KPIs translate strategic business objectives into measurable departmental performance indicators. While Strategic KPIs provide executive leadership with an organization-wide view of business health, Tactical KPIs enable department managers to evaluate operational effectiveness within their respective business functions.

These KPIs focus on monitoring service quality, operational efficiency, customer engagement, and restaurant performance, allowing department heads to identify performance gaps, coordinate cross-functional improvements, and ensure that strategic objectives are effectively executed at the operational level.

The Tactical KPI layer consists of the following indicators:

- Operational Health Score (OHS)
 - Customer Loyalty Score (CLS)
 - Restaurant Performance Score (RPS)
-

Figure 2.5 – Tactical KPI Hierarchy

2.5 Operational Health Score (OHS)

Figure 2.6 – Operational Health Score Framework

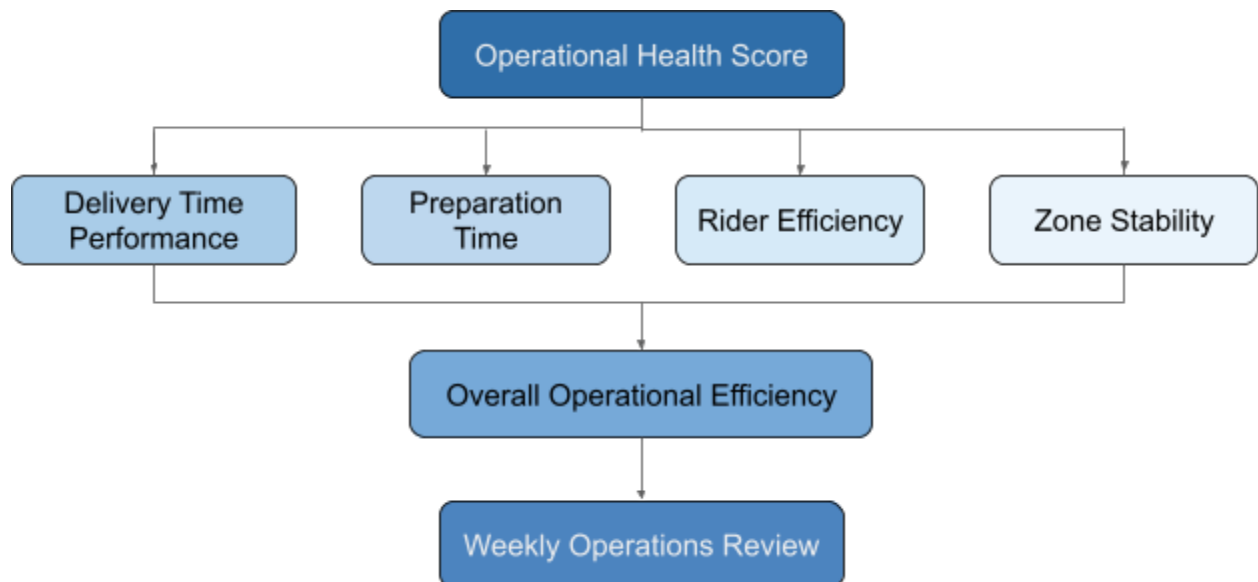

Table 2.14 – Operational Health Score Profile

Attribute	Description
KPI Name	Operational Health Score (OHS)
KPI Category	Tactical KPI
Primary Stakeholder	Operations Manager
Business Objective	Measure the overall operational efficiency of food delivery operations across all cities and delivery zones.
Review Frequency	Weekly
Dashboard	Operations Dashboard
Reporting Level	Departmental

2.5.1 Business Purpose

The Operational Health Score provides a consolidated assessment of day-to-day operational performance across the food delivery network. It evaluates whether deliveries are being completed efficiently by combining multiple operational indicators into a single tactical KPI. This enables operations managers to identify service bottlenecks, monitor execution quality, and ensure that operational processes remain aligned with business objectives.

2.5.2 Business Importance

Efficient operations directly influence delivery speed, customer satisfaction, restaurant productivity, and overall business profitability. The Operational Health Score allows management to monitor operational performance continuously, detect emerging inefficiencies before they escalate, and coordinate corrective actions across cities, restaurants, and rider networks. By providing a unified operational perspective, the KPI supports proactive management rather than reactive problem-solving.

Table 2.15 – Supporting Metrics of Operational Health Score

Supporting Metric	Business Contribution
Average Delivery Time	Measures delivery efficiency.
Average Preparation Time	Reflects restaurant operational performance.
On-Time Delivery Rate	Indicates service reliability.
Rider Efficiency Score	Measures rider productivity.
Zone Stability Index	Identifies operational consistency across delivery zones.

2.5.3 Key Business Questions

Business Question	Business Value
Which cities consistently experience operational delays?	Helps prioritize operational improvements.
Which restaurants contribute most to delayed deliveries?	Supports restaurant performance reviews.
Which delivery zones require operational intervention?	Enables zone-level optimization.
How does weather affect operational efficiency?	Assists in contingency planning.
Are operational improvements delivering measurable results week over week?	Measures effectiveness of implemented actions.

2.5.4 Business Logic

The Operational Health Score evaluates overall operational efficiency by integrating multiple operational performance indicators into a single tactical KPI. The score considers delivery performance, restaurant preparation efficiency, rider productivity, and delivery zone stability to provide a balanced assessment of operational effectiveness. Rather than measuring isolated activities independently, the KPI reflects the collective impact of operational processes on service quality and execution efficiency.

2.5.5 Threshold Levels

Table 2.16 – Operational Health Score Threshold Matrix

OHS Score	Business Status	Operational Interpretation
85–100	Excellent	Operations are highly efficient and consistently meeting service expectations.
70–84	Stable	Operations remain healthy with opportunities for optimization.
50–69	Attention Required	Operational inefficiencies require departmental review.
Below 50	Critical	Immediate operational intervention is necessary to restore service quality.

2.5.6 Business Interpretation

A high Operational Health Score indicates that operational activities are being executed efficiently across restaurants, riders, and delivery zones. Lower scores highlight the presence of operational bottlenecks such as increasing delivery delays, restaurant preparation issues, inefficient rider allocation, or unstable delivery zones. The KPI serves as the primary tactical indicator used by operations management to prioritize improvement initiatives.

2.5.7 Recommended Business Actions

Table 2.17 – Recommended Business Actions

Business Condition	Recommended Action
Excellent	Continue monitoring and document operational best practices.
Stable	Optimize delivery routing and improve restaurant coordination.
Attention Required	Investigate operational bottlenecks and assign corrective actions.
Critical	Conduct an immediate operational review and implement recovery measures across affected cities and delivery zones.

2.5.8 Dashboard Representation

The Operational Health Score will be displayed as the primary KPI within the Operations Dashboard. Supporting visualizations will include delivery time trends, preparation time analysis, city-wise operational performance, zone-level stability monitoring, rider efficiency tracking, and operational alerts. Interactive drill-down capabilities will allow operations managers to investigate individual cities, restaurants, and delivery zones to identify the underlying causes of declining operational performance.

2.5.9 Related KPIs

Table 2.18 – Related KPIs

Related KPI	Relationship
Executive Health Index	Operational Health directly contributes to executive performance assessment.
Restaurant Performance Score	Restaurant efficiency significantly influences operational performance.
Rider Efficiency Score	Rider productivity affects delivery execution.
Zone Stability Index	Stable delivery zones improve operational consistency.

2.5.10 Business Risks

Table 2.19 – Business Risks

Risk	Potential Business Impact
Increasing Delivery Delays	Reduced customer satisfaction and lower service reliability.
Poor Rider Allocation	Lower operational productivity and higher delivery times.
Restaurant Preparation Delays	Order backlogs and increased customer waiting time.
Unstable Delivery Zones	Reduced operational consistency and increased service disruption.

Tactical KPI Relationships

Purpose

Tactical KPIs translate strategic business objectives into measurable departmental performance indicators. They provide department managers with actionable insights into operational execution, customer engagement, and restaurant performance, enabling timely decisions that directly influence organizational success.

Tactical KPI Coverage

Table 2.20 – Tactical KPI Responsibilities

Tactical KPI	Primary Department	Primary Business Focus
Operational Health Score (OHS)	Operations	Operational Efficiency
Customer Loyalty Score (CLS)	Marketing & Customer Experience	Customer retention and Satisfaction
Restaurant Performance Score (RPS)	Restaurant Success Team	Restaurant quality and Partner Performance

Transition Statement

The following sections document each Tactical KPI in detail, defining its business purpose, supporting metrics, analytical logic, performance thresholds, recommended actions, and relationship with the broader enterprise KPI framework. Collectively, these KPIs provide department managers with actionable insights required to improve operational performance and support strategic business goals.

2.6 Customer Loyalty Score (CLS)

Figure 2.7 – Customer Loyalty Score Framework

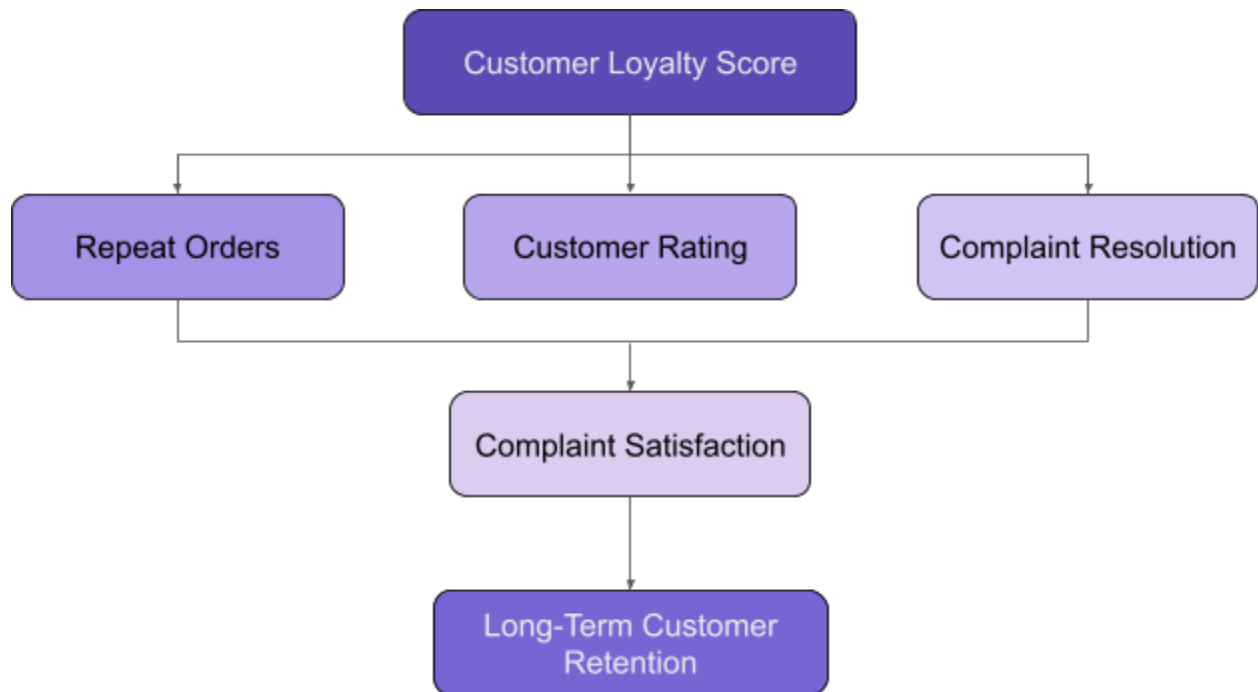

Table 2.21 – Customer Loyalty Score Profile

Attribute	Description
KPI Name	Customer Loyalty Score (CLS)
KPI Category	Tactical KPI
Primary Stakeholder	Marketing Team & Customer Experience Team
Business Objective	Measure customer retention, satisfaction, and long-term engagement across the platform.
Review Frequency	Weekly
Dashboard	Customer Experience Dashboard
Reporting Level	Departmental

2.6.1 Business Purpose

The Customer Loyalty Score measures the strength of customer relationships by evaluating repeat purchasing behaviour, customer satisfaction, service quality, and complaint resolution. The KPI enables marketing and customer experience teams to identify customer retention trends, strengthen engagement strategies, and improve long-term customer lifetime value.

Table 2.22 – Supporting Metrics

Supporting Metric	Business Contribution
Repeat Order Rate	Indicates customer retention and repeat purchasing behaviour.
Average Customer Rating	Measures perceived service quality.
Complaint Resolution Rate	Reflects effectiveness of customer support.
Customer Lifetime Value	Represents long-term customer contribution.
Order Frequency	Measures customer engagement with the platform.

2.6.2 Key Business Questions

Business Question	Business Value
Which cities have the highest customer loyalty?	Helps identify successful regional strategies.
Which restaurants consistently receive repeat customers?	Supports restaurant partnership decisions.
How do delivery delays influence customer loyalty?	Measures operational impact on customer retention.
Does weather significantly affect customer satisfaction?	Supports service planning during adverse conditions.
Which customer segments require retention campaigns?	Improves marketing effectiveness.

Table 2.23 – Customer Loyalty Score Threshold Matrix

CLS Score	Business Status	Interpretation
85–100	Excellent	Strong customer retention and high satisfaction.
70–84	Stable	Healthy customer relationships with opportunities for improvement.
50–69	Attention Required	Declining customer engagement requiring intervention.
Below 50	Critical	Significant customer churn risk.

2.6.3 Dashboard Representation

The Customer Loyalty Score will be presented through a KPI card, weekly loyalty trend, repeat customer analysis, customer rating distribution, complaint resolution tracker, and city-wise loyalty comparison. Interactive filtering will enable stakeholders to analyze loyalty patterns by city, restaurant, customer segment, weather condition, and promotional campaigns.

Table 2.24 – Business Risks

Risk	Potential Business Impact
Declining Repeat Orders	Increased customer acquisition costs and lower retention.
Poor Customer Ratings	Reduced brand reputation and platform trust.
Unresolved Complaints	Higher customer churn and negative word-of-mouth.
Low Customer Engagement	Reduced long-term revenue growth.

2.7 Restaurant Performance Score (RPS)

Figure 2.8 – Restaurant Performance Score Framework

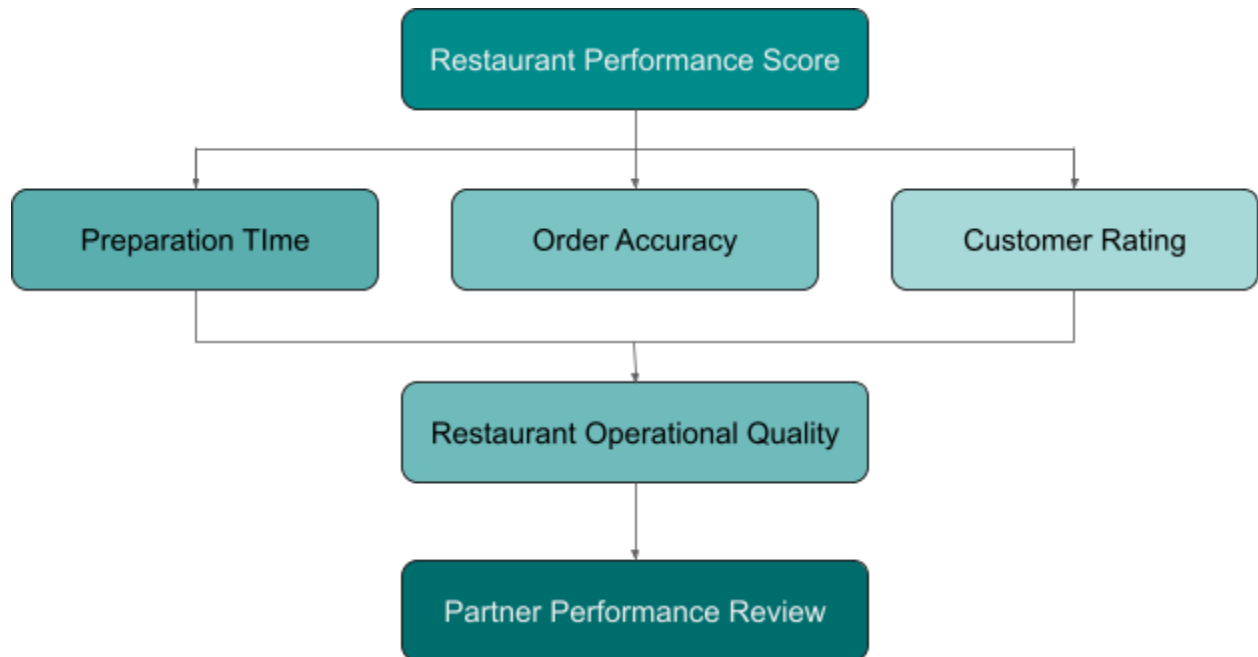

Table 2.25 – Restaurant Performance Score Profile

Attribute	Description
KPI Name	Restaurant Performance Score (RPS)
KPI Category	Tactical KPI
Primary Stakeholder	Restaurant Success Team
Business Objective	Evaluate restaurant partners based on operational efficiency, service quality, and customer satisfaction.
Review Frequency	Weekly
Dashboard	Restaurant Performance Dashboard
Reporting Level	Departmental

2.7.1 Business Purpose

The Restaurant Performance Score measures the operational quality and service performance of restaurant partners by combining preparation efficiency, order accuracy, and customer feedback into a unified tactical KPI. It enables the Restaurant Success Team to identify high-performing partners, support underperforming restaurants, and maintain consistent service quality across the platform.

Table 2.26 – Supporting Metrics

Supporting Metric	Business Contribution
Average Preparation Time	Measures kitchen efficiency and operational speed.
Order Accuracy Rate	Indicates reliability in order preparation.
Average Restaurant Rating	Reflects customer perception of food and service quality.
Order Acceptance Rate	Measures partner responsiveness to incoming orders.
Order Completion Rate	Indicates operational consistency and fulfillment reliability.

2.7.2 Key Business Questions

Business Question	Business Value
Which restaurants consistently exceed preparation time targets?	Identifies operational bottlenecks requiring improvement.
Which restaurant partners receive the highest customer ratings?	Helps recognize top-performing partners and establish best practices.
How does restaurant preparation time influence delivery performance?	Evaluates the impact of restaurant operations on overall service efficiency.
Which restaurants have the highest order cancellation rates?	Supports partner performance reviews and operational improvements.
Which restaurant categories demonstrate the strongest operational consistency?	Assists in benchmarking and partner development initiatives.

Table 2.27 – Restaurant Performance Score Threshold Matrix

RPS Score	Business Status	Interpretation
85–100	Excellent	Restaurant consistently delivers high operational and service performance.
70–84	Stable	Performance is satisfactory with opportunities for optimization.
50–69	Attention Required	Operational issues require review and corrective action.
Below 50	Critical	Immediate partner intervention and performance improvement are required.

2.7.3 Dashboard Representation

The Restaurant Performance Score will be displayed through a KPI card, restaurant ranking table, preparation time analysis, customer rating distribution, cancellation trend analysis, and category-wise performance comparison. Interactive drill-down capabilities will allow stakeholders to analyze individual restaurant performance by city, cuisine category, delivery zone, and operational metrics.

Table 2.28 – Business Risks

Risk	Potential Business Impact
Increasing Preparation Time	Longer delivery times and reduced customer satisfaction.
Low Order Accuracy	Increased complaints, refunds, and negative customer reviews.
Declining Customer Ratings	Reduced restaurant reputation and customer retention.
High Order Cancellation Rate	Lower platform reliability and decreased operational efficiency.

PART III – Operational KPIs

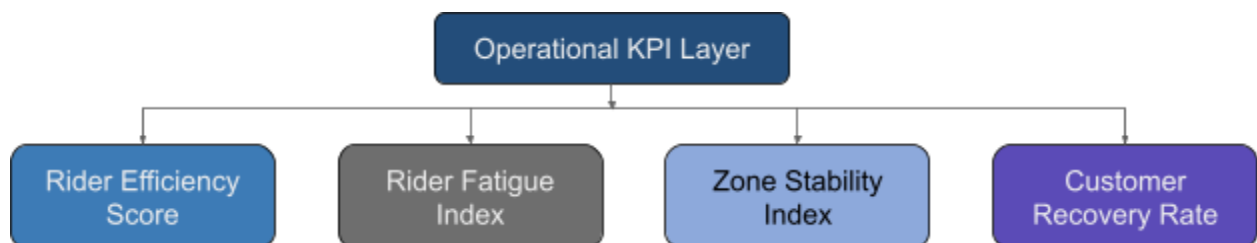

Purpose

Operational KPIs monitor the day-to-day execution of business operations and provide frontline teams with measurable insights into rider productivity, delivery stability, and customer service quality. Unlike Strategic and Tactical KPIs, these indicators focus on operational activities that directly influence customer experience and overall business performance.

The Operational KPI layer consists of:

- Rider Efficiency Score (RES)
 - Rider Fatigue Index (RFI)
 - Zone Stability Index (ZSI)
 - Customer Recovery Rate (CRR)
-

Figure 2.9 – Operational KPI Hierarchy

2.8 Rider Efficiency Score (RES)

Figure 2.10 – Rider Efficiency Score Framework

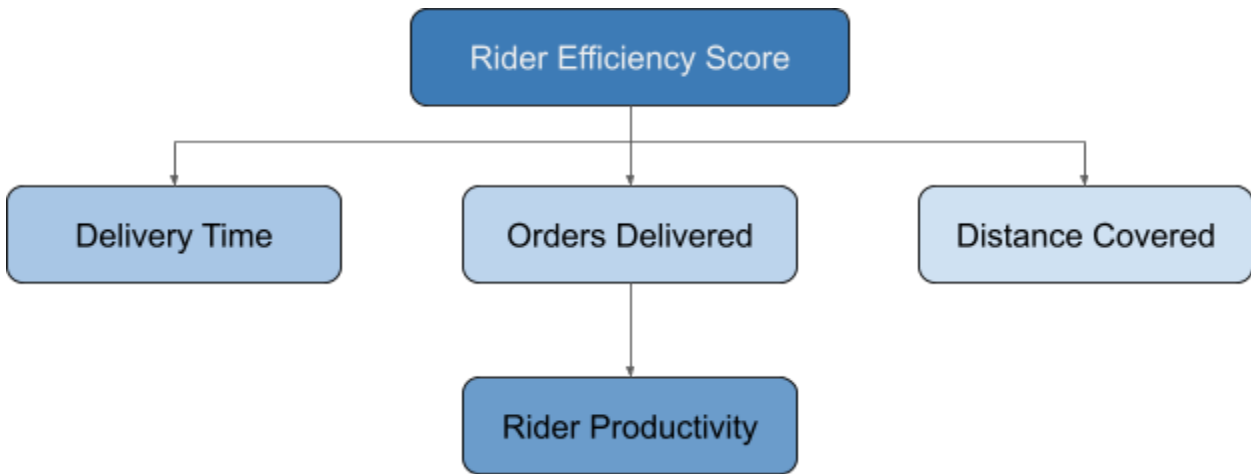

Table 2.29 – Rider Efficiency Score Profile

Attribute	Description
KPI Name	Rider Efficiency Score (RES)
KPI Category	Operational KPI
Primary Stakeholder	Operations Team
Business Objective	Measure rider productivity and delivery efficiency.
Review Frequency	Weekly
Dashboard	Operations Dashboard

2.8.1 Business Purpose

The Rider Efficiency Score evaluates rider productivity by measuring delivery efficiency, order completion, and operational consistency. The KPI enables operations teams to identify high-performing riders, optimize rider allocation, and improve delivery performance.

Table 2.30 – Supporting Metrics

Supporting Metric	Business Contribution
Average Delivery Time	Measures delivery speed.
Orders Delivered	Represents rider productivity.
Distance Covered	Measures operational workload.
On-Time Delivery Rate	Indicates delivery reliability.

2.8.2 Key Business Questions

Business Question	Business Value
Which riders consistently achieve the fastest deliveries?	Identifies top-performing riders.
Which cities have the most efficient rider fleet?	Supports workforce planning.
Does delivery distance reduce rider efficiency?	Optimizes delivery assignment.
Which riders require operational support?	Improves performance management.

Table 2.31 – Rider Efficiency Score Threshold Matrix

RES Score	Business Status	Interpretation
85–100	Excellent	High rider productivity.
70–84	Stable	Consistent delivery performance.
50–69	Attention Required	Operational improvement needed.
Below 50	Critical	Immediate operational review required.

2.8.3 Dashboard Representation

The Rider Efficiency Score will be displayed through KPI cards, rider rankings, city-wise efficiency analysis, delivery time trends, and operational productivity comparisons.

Table 2.32 – Business Risks

Risk	Potential Business Impact
Low Rider Productivity	Increased delivery delays and operational costs.
Uneven Rider Allocation	Reduced fleet efficiency.
High Delivery Time	Lower customer satisfaction.
Poor On-Time Delivery Rate	Reduced service reliability.

2.9 Rider Fatigue Index (RFI)

Figure 2.11 – Rider Fatigue Index Framework

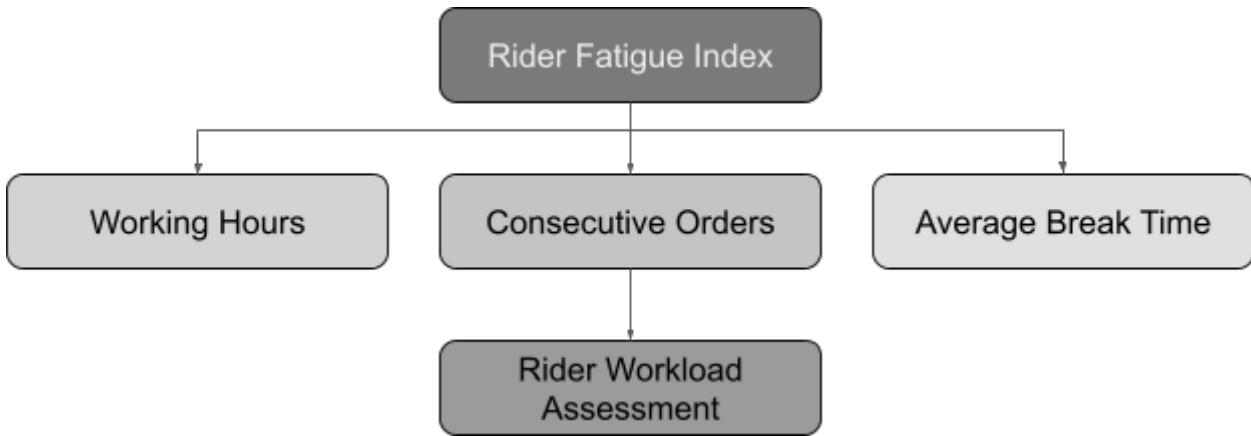

Table 2.33 – Rider Fatigue Index Profile

Attribute	Description
KPI Name	Rider Fatigue Index (RFI)
KPI Category	Operational KPI
Primary Stakeholder	Operations Team
Business Objective	Monitor rider workload to reduce fatigue, improve delivery performance, and support rider well-being.
Review Frequency	Weekly
Dashboard	Operations Dashboard

2.9.1 Business Purpose

The Rider Fatigue Index evaluates rider workload by monitoring working hours, consecutive deliveries, and break patterns. It helps operations teams identify riders at risk of fatigue, enabling proactive workload balancing that improves delivery quality, rider safety, and operational efficiency.

Table 2.34 – Supporting Metrics

Supporting Metric	Business Contribution
Working Hours	Measures total rider workload.
Consecutive Orders	Identifies continuous delivery pressure.
Average Break Duration	Indicates rider recovery opportunities.
Daily Deliveries	Reflects operational workload.

2.9.2 Key Business Questions

Business Question	Business Value
Which riders consistently exceed recommended working hours?	Supports workload balancing.
Does rider fatigue increase delivery delays?	Measures operational impact of fatigue.
Which cities experience the highest rider workload?	Assists workforce planning.
Are scheduled breaks reducing fatigue levels?	Evaluates operational policies.

Table 2.35 – Rider Fatigue Index Threshold Matrix

RFI Score	Business Status	Interpretation
0–25	Healthy	Rider workload is well balanced.
26–50	Moderate	Fatigue should be monitored.
51–75	High	Workload redistribution recommended.
76–100	Critical	Immediate operational intervention required.

2.9.3 Dashboard Representation

The Rider Fatigue Index will be presented through a KPI card, rider workload distribution, fatigue risk rankings, city-wise workload comparison, and trend analysis to support operational planning and rider allocation decisions.

Table 2.36 – Business Risks

Risk	Potential Business Impact
Excessive Rider Workload	Increased delivery delays and reduced productivity.
Insufficient Break Time	Higher fatigue and lower operational efficiency.
Uneven Work Distribution	Reduced workforce utilization and rider dissatisfaction.
Fatigue-Related Performance Decline	Lower customer satisfaction and increased operational risk.

2.10 Zone Stability Index (ZSI)

Figure 2.12 – Zone Stability Index Framework

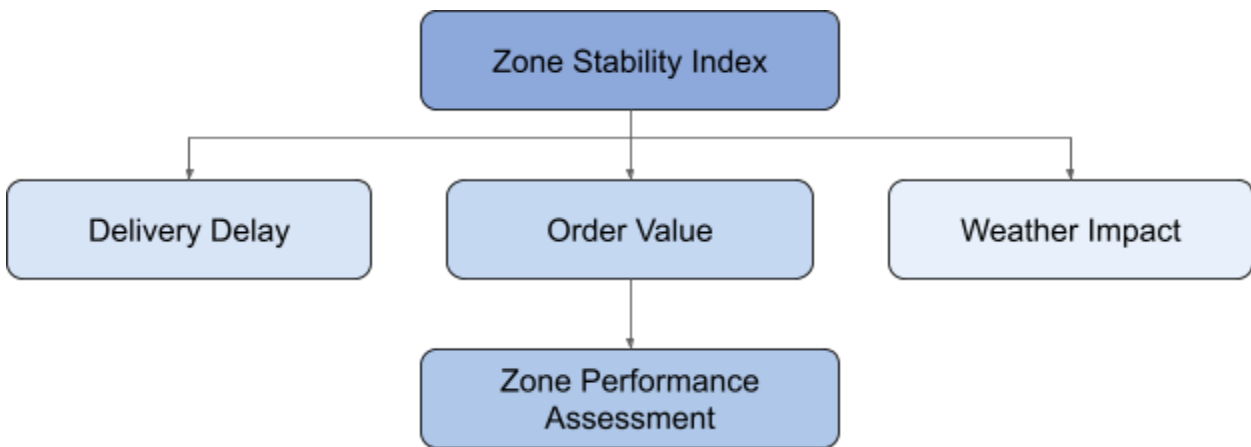

Table 2.37 – Zone Stability Index Profile

Attribute	Description
KPI Name	Zone Stability Index (ZSI)
KPI Category	Operational KPI
Primary Stakeholder	Operations Team
Business Objective	Evaluate the operational consistency and service stability of delivery zones across all cities.
Review Frequency	Weekly
Dashboard	Operations Dashboard

2.10.1 Business Purpose

The Zone Stability Index measures how consistently each delivery zone performs by evaluating delivery delays, operational demand, and external influences such as weather. It enables operations managers to identify unstable zones, optimize resource allocation, and improve service reliability across the delivery network.

Table 2.38 – Supporting Metrics

Supporting Metric	Business Contribution
Average Delivery Delay	Measures operational consistency.
Weekly Order Volume	Indicates workload within the zone.
Weather Severity	Evaluates environmental impact on operations.
On-Time Delivery Rate	Measures delivery reliability.

2.10.2 Key Business Questions

Business Question	Business Value
Which delivery zones experience the highest operational instability?	Prioritizes operational improvements.
How does weather affect zone performance?	Supports contingency planning.
Which zones require additional rider allocation?	Optimizes workforce distribution.
Are operational improvements increasing zone stability over time?	Measures effectiveness of interventions.

Table 2.39 – Zone Stability Index Threshold Matrix

ZSI Score	Business Status	Interpretation
85–100	Excellent	Zone is operating consistently with minimal disruptions.
70–84	Stable	Performance is reliable with minor operational variation.
50–69	Attention Required	Operational inconsistencies require monitoring.
Below 50	Critical	Immediate operational review is recommended.

2.10.3 Dashboard Representation

The Zone Stability Index will be displayed through a KPI card, city-wise zone comparison, operational heat map, weekly stability trend, weather impact analysis, and drill-down views for individual delivery zones.

Table 2.40 – Business Risks

Risk	Potential Business Impact
Persistent Delivery Delays	Reduced customer satisfaction and SLA compliance.
High Operational Variability	Inconsistent service quality across zones.
Severe Weather Disruptions	Increased delays and operational inefficiencies.
Poor Resource Allocation	Reduced delivery capacity and higher operational costs.

2.11 Customer Recovery Rate (CRR)

Figure 2.13 – Customer Recovery Rate Framework

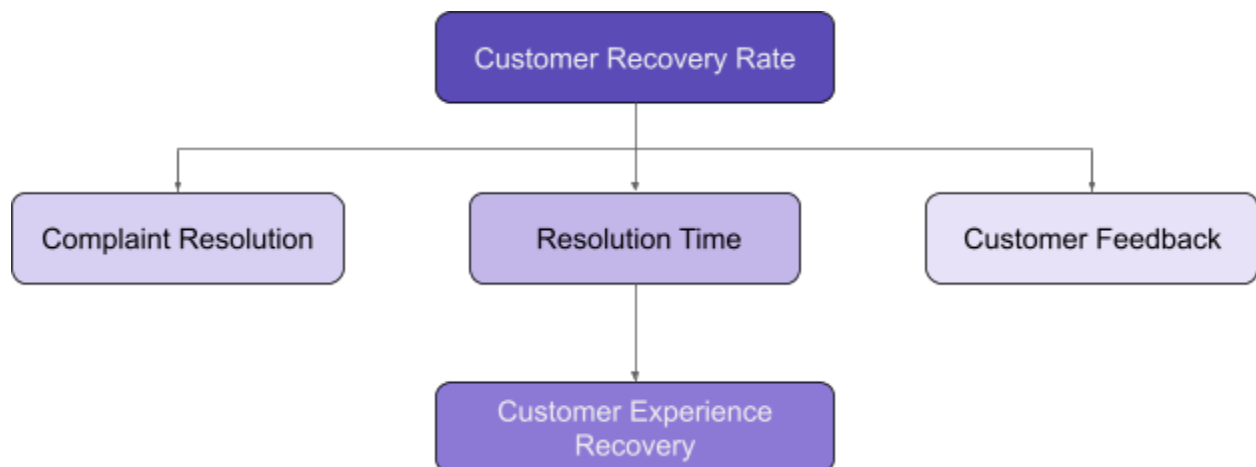

Table 2.41 – Customer Recovery Rate Profile

Attribute	Description
KPI Name	Customer Recovery Rate (CRR)
KPI Category	Operational KPI
Primary Stakeholder	Customer Experience Team
Business Objective	Measure the effectiveness of resolving customer complaints and restoring customer satisfaction.
Review Frequency	Weekly
Dashboard	Customer Experience Dashboard

2.11.1 Business Purpose

The Customer Recovery Rate evaluates how effectively customer issues are resolved by monitoring complaint resolution, response time, and post-resolution customer feedback. This KPI enables the Customer Experience Team to improve service quality, strengthen customer trust, and reduce customer churn through effective issue resolution.

Table 2.42 – Supporting Metrics

Supporting Metric	Business Contribution
Complaint Resolution Rate	Measures successful issue resolution.
Average Resolution Time	Indicates support efficiency.
Post-Resolution Customer Rating	Evaluates customer satisfaction after issue resolution.
Repeat Complaint Rate	Identifies recurring service issues.

2.11.2 Key Business Questions

Business Question	Business Value
Which complaint categories require the longest resolution time?	Improves support efficiency.
Which cities experience the highest complaint rates?	Identifies service quality issues.
Does faster complaint resolution improve customer satisfaction?	Evaluates effectiveness of customer support.
Which operational issues generate the most customer complaints?	Supports root-cause analysis and process improvement.

Table 2.43 – Customer Recovery Rate Threshold Matrix

CRR Score	Business Status	Interpretation
85–100	Excellent	Customer issues are resolved efficiently with high satisfaction.
70–84	Stable	Resolution process is effective with opportunities for improvement.
50–69	Attention Required	Complaint handling requires operational review.
Below 50	Critical	Immediate improvements in customer support are required.

2.11.3 Dashboard Representation

The Customer Recovery Rate will be presented through a KPI card, complaint category analysis, resolution time trends, city-wise complaint comparison, post-resolution satisfaction analysis, and support performance monitoring to help customer experience teams improve service quality.

Table 2.44 – Business Risks

Risk	Potential Business Impact
Slow Complaint Resolution	Lower customer satisfaction and increased churn risk.
Recurring Customer Complaints	Declining brand reputation and customer trust.
Poor Post-Resolution Experience	Reduced customer loyalty and repeat orders.
Inefficient Support Operations	Higher operational costs and lower service quality.

CHAPTER 3 – Analytics Governance & Conclusion

3.1 KPI Governance Framework

Table 3.1 – KPI Governance Matrix

KPI Category	Primary Owner	Review Frequency	Decision Level
Strategic KPIs	CEO & Leadership	Weekly	Executive
Tactical KPIs	Department Managers	Weekly	Departmental
Operational KPIs	Operations Teams	Daily / Weekly	Operational

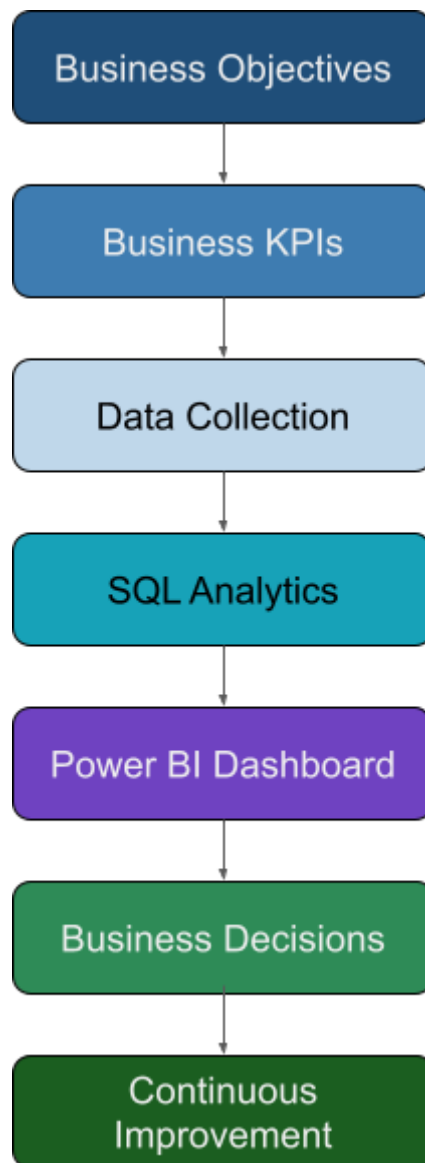

3.2 Alert & Escalation Framework

Table 3.2 – KPI Escalation Matrix

KPI Status	Recommended Action
Excellent	Continue monitoring and document best practices.
Stable	Maintain performance and identify optimization opportunities.
Attention Required	Investigate root causes and assign corrective actions.
Critical	Escalate to leadership and initiate immediate recovery measures.

3.3 Analytics Lifecycle Summary

Figure 3.1 – Project Velox Analytics Lifecycle

3.4 Conclusion

Project Velox establishes a structured analytics framework for measuring organizational performance across strategic, tactical, and operational levels. By integrating stakeholder-driven KPIs, standardized measurement principles, and decision-oriented analytics, the framework enables consistent performance evaluation and supports data-informed business decisions.

The Analytics & KPI Specification serves as the analytical foundation for subsequent implementation phases, including dataset design, database development, SQL-based business analysis, and interactive Power BI dashboards. Together, these components transform business requirements into a complete end-to-end Business Intelligence solution.
